

TextPipe Pro

Fix Text and Data 500% Faster! - An Automated Text Tool on Steroids!

Use TextPipe to update your web site, extract data from databases, reformat and standardize electronic text and program source code, data mine unstructured text reports and your competitor's web sites, cleanse data in legacy databases, split files or join files together, convert between a variety of mainframe and PC data formats - the possibilities are simply *endless*.

TextPipe provides more than 100 *filters* for manipulating text. TextPipe's unmatched power comes from its unique architecture and its tremendous flexibility in combining these filters to suit each task.

- Make multiple changes to multiple files in just one pass (eg 50 changes across a million page website)
- Restrict changes to line or column ranges, Tab or CSV field ranges, matching lines, inside and between HTML tags and other criteria
- Fix text or binary files of any size - even files larger than 10 Gigabytes!

Handle Text and Binary File Formats

- Text files (ASCII and EBCDIC)
- RTF files
- Unix, Macintosh, Mainframe and PC end-of-line formats
- HTML and XML files
- Comma-delimited, Tab-delimited, and Fixed-position data
- Mainframe print files
- Screen scrapes and captures
- Structured and unstructured reports and files
- Framemaker MIF files and more.

...even with all these bells and whistles, it's amazingly easy to use

ZDNet Review - 5/5 Stars

TextPipe can also call external programs to manipulate the text, and TextPipe can be called from other applications.

Lightning Fast Search and Replace

TextPipe offers a wide variety of powerful searches:

- Exact search (including multi-line and binary character search)
- Pattern or wildcard search
- 'Sounds-like' search
- Fuzzy search (great for finding typing errors)

The replacement text can preserve the case of the original, and can also include re-arrangements, which is very useful for reformatting phone numbers, names and dates.

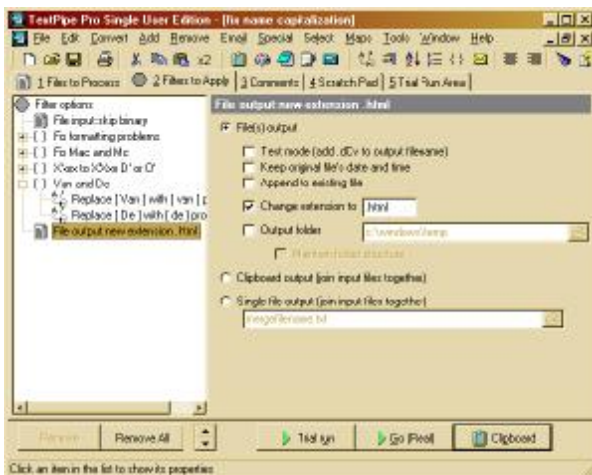

Extensive Manipulation Functions

TextPipe converts between

- DOS, Unix, Macintosh and Mainframe formats
- ASCII/OEM and ANSI formats
- ASCII and Mainframe EBCDIC formats
- Unicode and ANSI formats

TextPipe can add line numbers, add left and right margins, add headers and footers, add word wrapping and formatting. It can insert and remove columns, and delete lines or columns as well as HTML and extra white space characters.

TextPipe can split files or join files together, sort in a variety of ways, count or remove duplicate lines, map input characters to a set of output strings,

Manipulate text and data files in an endless variety of ways

VBScript and JScript Custom Filters

Extend TextPipe by writing custom filters using industry-standard VBScript, JScript or other scripting languages. Use this to perform database lookups, insert data in Excel or Word or other non-standard processing.

extract email addresses or web links, encode/decode email attachments and much more.

Automation and Integration

You can schedule TextPipe to run at predetermined times, and generate extensive audit logs.

TextPipe can be automated via the command line, or via an extensive COM interface, which allows third party applications and programming languages such as VB, C++ and Delphi to utilize TextPipe's text processing power.

TextPipe also integrates with a growing list of third party products:

- Web site downloaders
- SMS message senders
- Fax gateways
- askSam free form database

Easy To Learn and Use

TextPipe includes many facilities to help get you started:

- Filter Wizard walks you through creating your first filters
- Extensive tutorials and lessons introduce you to key concepts
- Test filters without affecting key data files
- Debug Filter to see what is happening
- Comment Filters to document your process
- Library of more than 200 example filter files

*...it's an **incredible 'Swiss Army knife'** of a tool that quickly became a part of my everyday work life. It was easy to pick up and apply on the fly to do things like text clean-up, perform columnar search and replace, reformatting output files, etc. You can use it the first minute you have it, but it's also something you'll grow into...*

Wide Range of Industries

TextPipe is used across a diverse range of industries, from banking and insurance, taxation, government and law to IT consulting, aerospace and genetics research.

Some of Our Clients

TextPipe is used by a large number of major clients, such as NASA, Boeing, Anderson Consulting, Lehman Brothers, Barnes and Noble, Commerzbank, Compaq, Symantec, Hewlett Packard, CompuServe, Ernst and Young, Johnson and Johnson, Nabisco, Siemens, San Francisco Chronicle and many other large organizations.

Web, Standard & Pro Editions

TextPipe comes in three editions - a Web edition for small websites, a Standard edition for programmers, and a Pro edition for Enterprise use, which adds database access, VBScript and JScript authoring and can be automated and controlled by other applications. TextPipe Pro also has a Run Time edition where editing is disabled, and a TextPipe Engine DLL which can be embedded in applications.

TextPipe runs on Windows 95, 98, ME, NT, 2000 and XP. It can optionally connect to any database via an ADO/ODBC database driver.

The TextPipe Difference

- ▶ Easily specify your text processing requirements - no arcane programming language to learn!
- ▶ TextPipe's architecture handles files of unlimited size, even files larger than 10 Gigabytes!
- ▶ TextPipe applies an unlimited number of manipulations with only one pass through each file
- ▶ Write filters in industry-standard VBScript or JScript for custom tasks
- ▶ TextPipe can extract data from databases in CSV, Tab, XML or SQL Insert Script format and then manipulate the output that is generated. The output can be even be inserted into a second database!

We also provide consulting services and can tailor TextPipe filters to suit your requirements.
